Abstract. The abstract should summarize the contents of the paper in short terms, i.e. 150-250 words. These guidelines describe the expected layout for a paper being submitted for presentation at the 8th International Congress on Computational Mechanics and Simulation (ICCMS 2021), to be held at IIT Indore, Madhya Pradesh, India during 10-12 December 2021, and to be included in the digital proceedings. The guidelines are aimed to ensure high quality and uniform presentation of the papers, to streamline the review and publication process and to optimize the trade-off between presentation detail and storage space. This document has been created in the required format. It can therefore be used as a template by simply typing over the existing contents of the file. The 'Paper ID' at top right corner of this page should be the 'Abstract ID' communicated to you during abstract submission. Do NOT use the Springer Proceedings Macros which is available with this document.

Keywords: computational geometry, graph theory, Hamilton cycles

1 First Section

1.1 A Subsection Sample

Please note that the first paragraph of a section or subsection is not indented. The first paragraphs that follows a table, figure, equation etc. does not have an indent, either.

Subsequent paragraphs, however, are indented.

Sample Heading (Third Level). Only two levels of headings should be numbered. Lower level headings remain unnumbered; they are formatted as run-in headings.

Sample Heading (Forth Level). The contribution should contain no more than four levels of headings. The following Table 1 gives a summary of all heading levels.

Table 1. Table captions should be placed above the tables.

Heading level	Example	Font size and style
Title (centered)	Lecture Notes	14 point, bold
1 st -level heading	1 Introduction	12 point, bold
2 nd -level heading	2.1 Printing Area	10 point, bold
3 rd -level heading	Run-in Heading in Bold. Text follows	10 point, bold
4 th -level heading	<i>Lowest Level Heading.</i> Text follows	10 point, italic

Displayed equations are centered and set on a separate line.

$$x + y = z \quad (1)$$

Please try to avoid rasterized images for line-art diagrams and schemas. Whenever possible, use vector graphics instead (see

Fig. 1).

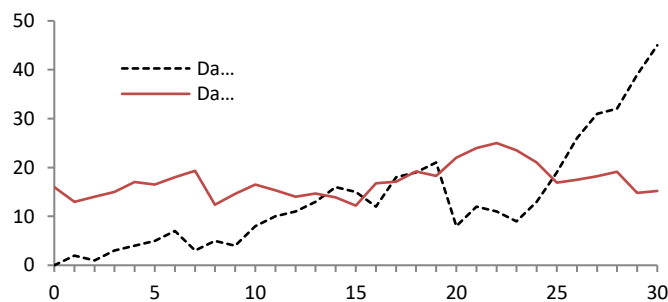

Fig. 1. A figure caption is always placed below the illustration. Short captions are centered, while long ones are justified. The macro button chooses the correct format automatically.

For citations of references, we prefer the use of square brackets and consecutive numbers. Citations using labels or the author/year convention are also acceptable. The following bibliography provides a sample reference list with entries for journal articles [1], an LNCS chapter [2], a book [3], proceedings without editors [4], as well as a URL [5].
